

Use Case

City Government

Project monitoring & KPI tracking.

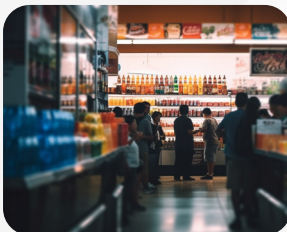

Enterprise

Operational KPI dashboards & executive reporting

Industry & Manufacturing

Monitor production lines, resource efficiency, and supply chain data.

Retail & Commerce

Understand customer behavior, sales trends, and inventory performance.

Turning Every Data Into Insight

Data integration, and centralized analytic.

About ORION

ORION is a unified data management and analytics platform that combine diverse data sources such as CSV/XLSX files, APIs, and IoT streams into one Big Data ecosystem. ORION turns scattered raw data into interactive dashboards, scheduled reports, real-time insights that support operational and strategic decisions, and this data catalog can be accessed by anyone, on the condition that access respects the original data owner's specified policies.

Why ORION?

ORION helps organizations accelerate reporting processes, maximize the value of existing data infrastructure, and maintain information security. With role-based access, encryption, and scaling capabilities **ORION is suitable for critical implementations in government and corporate environments.**

Deeper Insights

Not only faster results, but also new and more advanced information to support smarter decisions.

Quick Integration

Connect data from multiple sources quickly, without heavy setup or complex migration.

Scalable

Start small and expand seamlessly to enterprise-wide deployments.

Regulated & Secure

Data Agreement and encrypted search ensure privacy and clear sharing rules.

Main Feature

Data Manager

ORION's Data Manager keeps a live catalog of all ingested datasets with metadata, schema previews, and lineage. This makes it simple to discover datasets, track changes, and ensure analytics are always run against trusted sources.

Data Agreement

Data Agreement lets data owners attach usage terms, sharing rules, and consent conditions to any dataset. Agreements are enforced by ORION at query and API level, enabling safe data collaboration across teams and stakeholders.

Data Encrypted Search

With Encrypted Search, sensitive fields remain encrypted at rest and in transit while allowing secure search and filtering operations. This preserves confidentiality and regulatory compliance while keeping analytics capabilities intact.

How it Works

1

Connect

Link your sources: CSV/XLSX, REST API, databases, or IoT devices.

2

Collect

ORION automatically gathers data from all connected sources.

3

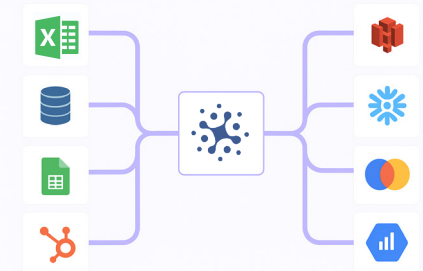

Process

Data is stored in Big Data storage and transformed for analytics.

4

Visualize & Act

Interactive dashboards, charts, and automated reports enable fast action.

Architecture
